# Multi-Agent Control in Sociotechnical Systems

Open loop dynamics

$$z_i(t+1) = g_i(z_i(t)) + \omega_i(t)$$

Closed loop dynamics

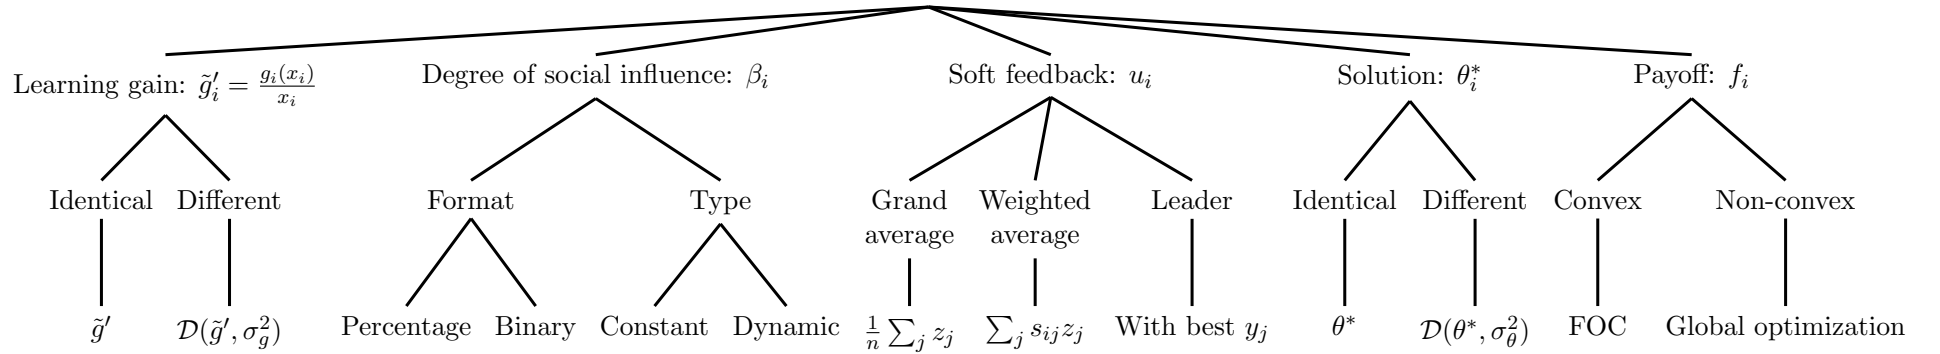

$$z_i(t+1) = (1 - \beta_i) \left( g_i(z_i(t)) + \omega_i(t) \right) + \beta_i u_i(t) \quad (i = 1, \dots, n),$$

$$x_i(t) = z_i(t) - \theta_i^*,$$

$$y_i(t) = f_i(x_i(t)) + \nu_i(t).$$

## Soft Regulation

Multi-Agent Control with Soft Feedback

Existing examples

Scenario	Learning function	Social influence	Soft feedback	Solution	Payoff
Particle swarm optimization	Local best	$[0, 100\%]$	Leader	Identical	Non-convex
James-Stein estimator	LMS estimator	$[0, 100\%]$	Grand average	Different	Squared error
Social learning	Asocial learning	$\{0, 100\%\}$	Leader	Identical	Non-convex
Wisdom of crowds	-	-	Grand average	Identical	-
Collective dynamics	-	100%	Weighted average	-	-
